Billing Examples

BILLING CONSIDERATIONS

- Debridement is considered a component of the application code.
- Minimal wound preparation is considered part of the application.
- Only 1 primary application code can be billed even if you have multiple wounds for similar anatomic locations (e.g., trunk, arms, leg). Select the code that represents the total of all wounds for that anatomical grouping. Bill the total units for the product.
- The application code is based on wound size and the product code is based on product size. Healthcare Professionals should use the appropriate size product for the wound size to minimize wastage.

The following examples represent Medicare reimbursement.

The following grid provides guidance on billing skin substitute application procedure codes by wound size and anatomical location. For example, a 53 cm^2 wound on the leg should be billed with 1 unit of 15271 and 2 units of 15272. Add-on codes (+) cannot be billed alone. In addition to the procedure code, the product code (Q4186) should be billed with the total units of the product. Reference the EPIFIX Sizes grid on page 1 to determine billing units by product size.
